XSD Schema Set Connection

Use it to connect to XSD files, specifying the connection parameters for a list (set) of schema files.

Connection parameters

To configure the connection, you need to list some paths to XML schema files. The wizard toolbar contains the following commands:

- **Add**: Adds a new XSD schema file to the list, selected by the user in the file selection dialog.
- **Up** or **Down**: Changes the position of the selected item in the list.
- **Change**: Opens the file selection dialog to edit the path to the XSD file.

List-changing commands:

- **Delete all**: Located in the top right of the list; deletes all listed files.
- **Delete**: Deletes the selected item from the list.
