Homepage

When you open the Megaladata desktop application, or after you log in to a server edition, the homepage appears, offering further actions related to packages.

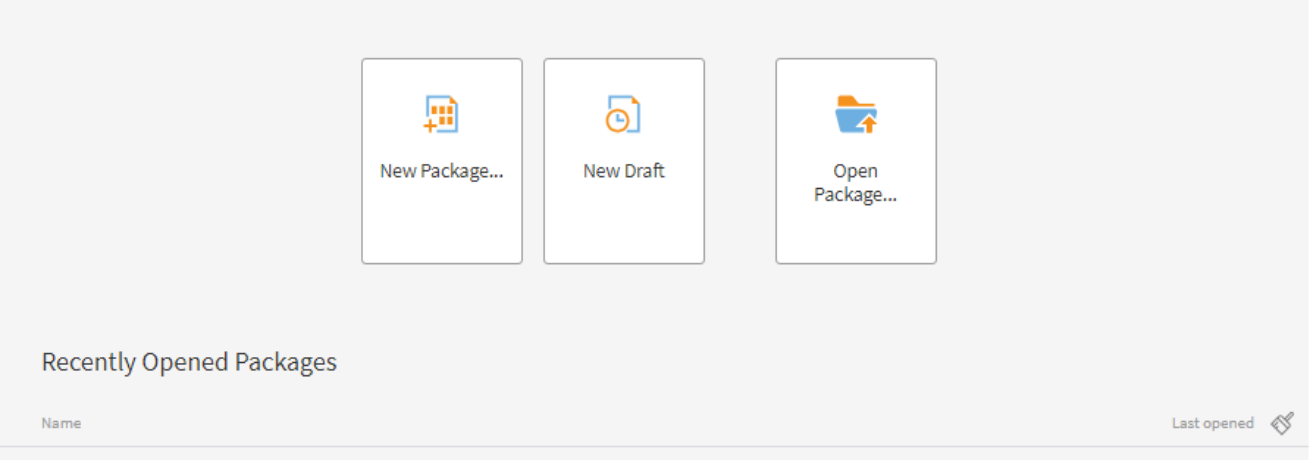

Figure 1. Homepage

From this page, you can proceed using the following commands:

- **New Package**: Creates and saves a new package.
- CTRL + **New Package**: Creates a new package and opens it in a new tab.
- **New Draft**: Creates a new package in which you can work without saving it immediately.
- CTRL + **New Draft**: Opens a draft in a new tab.
- **Open Package**: Opens an existing package file.
- CTRL + **Open Package**: Opens an existing package in a new tab.

Below the main commands, there is the section **Recently Opened Packages**, which shows the history of packages with the following fields:

- **Name**: The name of the package file.
- **Last opened**: The date and time the package was last opened.

> **Note:** You can open a package by clicking it in this list. Pressing CTRL when selecting a package from the recent list will open the package in a new tab.
