Result Dataset

The resulting dataset includes the columns from the source dataset and the columns that the node calculates. The table below describes them:

Column name	Description
Bin identifier	Specifies the field name
Bin index	Represents the sequential bin number
Caption	Displays the bin caption set via a template in the wizard
Lower bound	Defines the lower bound of the bin
Upper bound	Defines the upper bound of the bin
Lower bin bound inclusive	Indicates whether the bin bound belongs to the bin: false (does not belong); true (belongs)
Upper bin bound inclusive	Indicates whether the bin bound belongs to the bin: false (does not belong); true (belongs)
Lower bin bound open	Shows "true" if you select the Lower bound open checkbox; "false" otherwise.
Upper bin bound open	Shows "true" if you select the Upper bound open checkbox; "false" otherwise.
Out of range value	Indicates values that do not fall into any range: -1 (less than the smallest range bound), 0 (belongs to a bin), or 1 (greater than the upper range bound).
