Filter

It enables to select the records that meet one or several criteria. Several criteria are joined into the complex criterion using the logical AND/OR operators.

Configuration Window

Area of the filtering criteria settings is located in the window. The new criterion is added by pressing + button. Then it is required to select the field name, comparison ratio (Condition) and comparison value. When creating several criteria, it is required to set the logical AND/OR operators between them. AND operator is set by default. To change the operator, it is required to left-click on it.

After filtering setup, it is required to press *Filter* button.
