Search

Search for cells in table by value.

Configuration Window

It is possible to set the search mode, comparison mode and case in the search configuration window.

The search mode enables to define the highlighting order of the found values:

- **By rows**: the next found value will be highlighted in the next row.
- **By columns**: the next found value will be highlighted in the next column.
- **In column**: the next found value will be highlighted in the selected column.

The comparison mode defines position of the searched fragment:

- **Substring**: the searched fragment is in any value position.
- **From the start**: the searched fragment is only in the value start.
- **Full**: the searched fragment fully repeats the value.

Case-sensitive checkbox provides the case-sensitive search.
